

Traditional vinyl can't compare to our new blockout mesh.

The ultimate in weatherproofing and longevity, blockout mesh banners are the new tough but attractive option for areas with harsh weather or if you just want your banners to last longer.

Blockout mesh is a 14 ounce substrate, which is far stronger than traditional 8 ounce mesh. Blockout mesh actually reduces wear on banner poles, unlike traditional vinyl which can cause poles to warp after long exposure to heavy winds.

Unlike traditional vinyl or fabric street banners, there is no need for unsightly wind slots to reduce wind load - the porous mesh design incorporates wind resistance into the design. Even if you have no need for its tougher properties, the capability of having a different design printed on each side along with its superior longevity make blockout mesh a great option for any conditions.

Features:

- Porous vinyl allows air to flow through it to reduce wind load.
- Antifungal and flame retardant.
- Each side can be printed with a different image.
- Digitally printed on 14 ounce mesh.
- Designed to last 10+ years and comes with a 5 year manufacturer's warranty.
